

INTRODUCTION TO STOCK MARKET INDEX

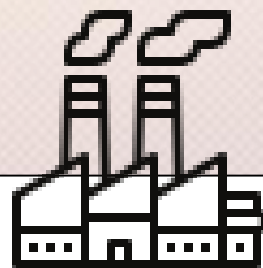

WHAT IS A STOCK MARKET INDEX?

Stock market index is a number calculated from the prices of many different stocks.

Performance

It is used to track the performance of a specific group of bonds, stocks and other investments.

Industry

The investments are often grouped around a specific industry, e.g., technology or healthcare stocks.

Funds

Investors can invest in indices through index funds and exchange-traded funds (ETFs).

COMMON MODELS OF INDEX WEIGHTING

Market-Cap Weighted

Stocks are weighted based on market value. E.g., large companies have a greater impact on the overall index's performance.

Equal Weighted

All companies in an index have the same impact on the index, regardless of the size of company.

Price Weighted

Each company has a different weight based on its share price, regardless how big or small the company is.
